March 22 to July 24

ANHEMBI MORUMBI COLLEGE - COMPLETED

- Systems development analysis

COURSES

- **Bytebank com Angular/Js - 15hrs**
- **Banking Transactions with JavaScript and TypeScript - 15 hours**
- **Aparecida Nutrition to discover your BMI, JavaScript and TypeScript – 3 PM**

SKILLS

- React / Next.js
- Node.js
- MYSQL
- Flutter/Dart - Framework App
- TypeScript
- JavaScript
- HTML/CSS

PROFILE

- I am a Full Stack Developer with hands-on experience in Flutter/Dart, Node.js, React, Next.js, JavaScript, TypeScript, Laravel, PHP, and HTML/CSS. I work on the complete development of applications, from front-end to back-end, creating modern interfaces, functional APIs, and scalable systems. I also have experience with UX/CX, combining technical knowledge with a digital marketing perspective to deliver efficient, intuitive, and visually well-built solutions.

BACKGROUD CORPORATIVO

Integrade

- Full Stack Developer - Integrade Consulting (Inventory Management Company)
- Expertise in developing and maintaining web and mobile solutions focused on controlling and managing assets. My main responsibilities include:
- Development and improvements to iFlow, a web platform used by clients to manage inventory movements, implementing corrections and improvements to layout and usability using React and Node.js.
- Development of the mobile application in Flutter/Dart, used by the field team to register items, including image capture and sending information to the database.
- Conversion and processing of databases sent by clients, working on data migration and standardization between MySQL and Oracle, ensuring consistency and integrity of information.

CASIO BRAZIL

- Responsible for payments and contracts for my team. Using the TOTVS system for payments and PROJURIS for contracts. For some analysis, studies, and planning, I use Excel.

LANGUAGE

- English - Intermediate / Advanced

PROJECTS

- Gui's System – Scheduling Platform for Clinics
- Development of a complete web system for managing clinic appointments, using Laravel (PHP) with MVC architecture and integration with a MySQL database. The platform allows for user registration and authentication, client management, appointment creation and control, as well as a history of appointments. The system was developed with a focus on code organization, separation of responsibilities, information security, and data integrity, ensuring a scalable structure prepared for future expansions and multiple users.
